jayakrishnasri13@gmail.com

Dedicated to advancing the field of Generative AI, applying state-of-the-art technologies to develop intelligent systems that propel business efficiency and lead innovation. With a deep commitment to navigating and solving complex challenges in Generative AI, I aim to contribute to a dynamic team, enhancing my skills and driving impactful advancements in groundbreaking technology projects.

PROFESSIONAL EXPERIENCE

Tata Consultancy Services (TCS), Hyderabad, TS [*System Engineer June,2023 – Present*]

Collaborated with team members to develop an AI-powered chatbot in Webex for Cisco MBR users using Python, FastAPI, and Aisera platform, leveraging Retrieval-Augmented Generation (RAG) to solve queries by retrieving information from a knowledge base, raise support tickets and service requests within Webex, and send real-time notifications to approvers, resulting in a 30 - 40% reduction in overall ticket volume.

Integrated the AI-powered chatbot into pre-existing MBR dashboards using JavaScript, Python, FastAPI, and Langchain, enabling users to ask natural language queries and navigate across dashboards based on identified intents. Enhanced functionality includes plotting graphs based on user-requested data for improved data understanding, thereby improving data accessibility and user experience.

Designed and implemented an agentic workflow - driven POC Inventory management system, enabling users to query databases using natural language translated into SQL. The solution also automated the generation of service agreements and drafted context-aware emails in multiple languages using AzureOpenAI model.

EDUCATION

B Tech (IT), VNRVJIET, CGPA: 9.36 (2023)

Class XII, Sri Chaitanya Junior College, CGPA: 9.82 (2019)

Class X, Scholars E.M High School, CGPA: 10.0 (2017)

ACADEMIC PROJECTS

Sorting Visualizer

Developed a visualization tool for computer science students to learn sorting algorithms featuring adjustable bars controlled via CSS. Enabled customization of animation speeds and array lengths, with real-time display of each algorithm's time complexity. Crafted a responsive user interface using HTML, CSS, and Bootstrap and implemented the core functionalities in JavaScript to enhance interactive learning.

Image Captioning System

Developed a deep learning image captioning system using computer vision techniques, integrating CNN and LSTM networks for feature extraction, analyzing and describing image content. Enabled functionalities such as image uploading, automatic caption generation, and voice output to enhance user accessibility. Trained the system on the Flickr8K dataset from Kaggle and evaluated performance using the BLEU score.

SKILLS

Languages & Frameworks: Python , CPP, JavaScript ,FastAPI, Flask, React.js, Streamlit

Technologies & Platforms: LangChain, LangGraph, Semantic Kernel, Hugging Face, RAG, LibreChat, TensorFlow, Keras , Numpy

Specialized Areas: Generative AI, Machine Learning, Computer Vision, Data Structures & Algorithms

Databases: ChromaDB, MySQL, Neo4j

Version Control: Git, Bitbucket

ACHIEVEMENTS

Achieved a rank of 521 in GATE-2022.

Received the Onspot Award twice for being recognized as the best team member, a testament to consistent exceptional performance and collaboration.

Awarded the Prathibha Puraskar by the Andhra Pradesh government for academic excellence in SSC.
